"He's way taller than me"

Q I'm really looking forward to hooking up with this guy. I like him a lot and find him very sexually attractive, but there's a small problem. I'm 5'3" and he's 6'10"! Since it's awkward to hug when we're both standing, I'm worried that it's going to be tricky when we have sex. Any advice on good positions for oral sex and intercourse so things can line up and my nose won't be in his belly button?

A You've got nothing to worry about. Countless couples varying in size and shape have figured out ways for their bodies to mesh. As soon as you and your new guy get it on, you'll learn to master carnal configurations that work for the two of you.

Given the size discrepancy, it might be hard for you to manage the 69 position, so during oral action take turns focusing on each other. As for doing the deed, the only position that might pose a problem is both of you standing. While your best bets are those positions in which you don't have to be aligned, such as woman-on-top and doggie-style, you can easily make the missionary work as long as he supports his weight with his arms, holding his body above yours. The even better news: Thanks to your out-of-sync sizes, you may be able to easily maneuver some moves that are difficult for more equally proportioned couples, like having him stand while holding you with your legs around his waist. Just remember, good sex is all about trial and error. You won't know exactly what will work until you experiment. And won't that be fun!
